

## Backup ADX (Accudemia Data eXchange) configurations

In order to backup your import job configurations and login credentials stored in your current ADX installation you'll need to do the following:

1. On the machine where you have ADX currently installed and configured press the **Windows Logo key + R** to open the run dialog box.

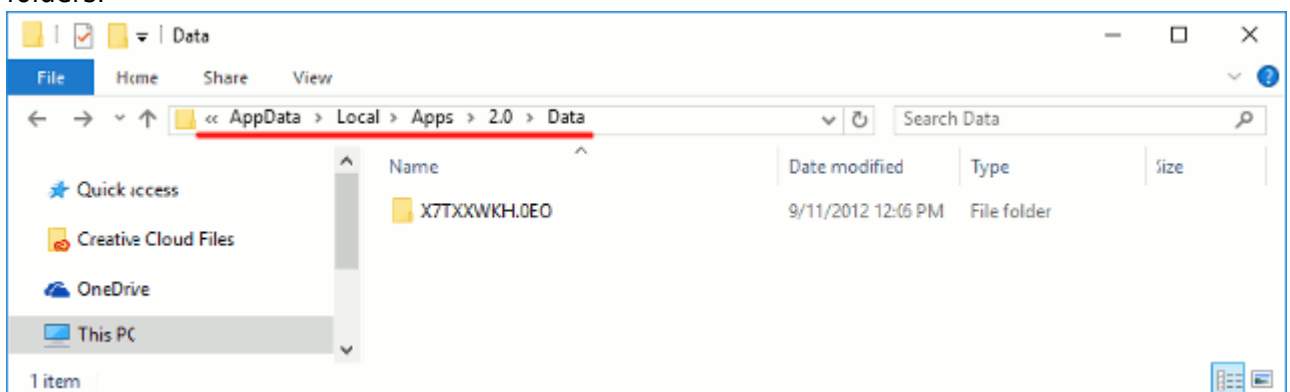

- Type:

```
C:\Users\%username%\AppData\Local\Apps\2.0\Data\
```

where %username% should be automatically replaced with the name of the *Windows User Account* you're logged into the PC currently.

2. You'll notice inside this folder there will be several uniquely numbered folders per ADX installation. Search for and locate a file labeled **APPLICATION.FDB** inside of one of these sub-folders.

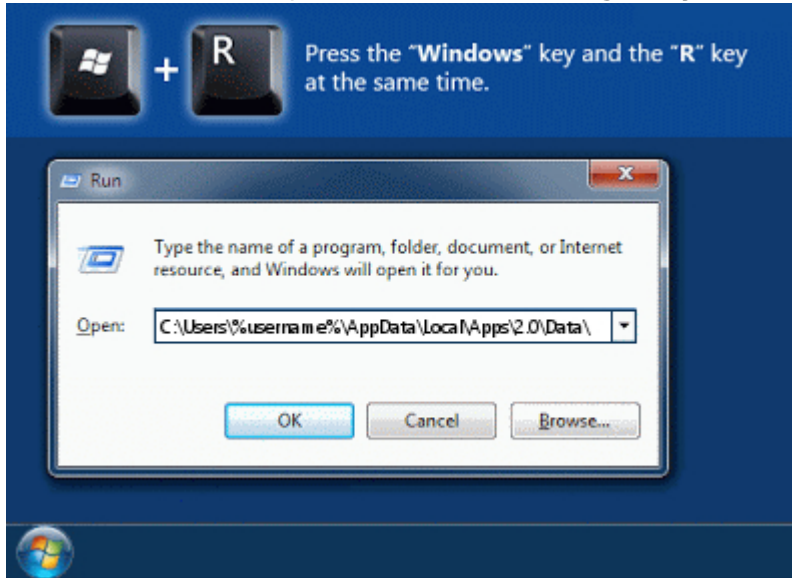

3. Now select the file, right-click it, and select **Copy**.  
(If you find more than one of these files choose the one with the latest date)
4. Finally right-click the location you want to backup the configuration file and select **Paste** to backup this **APPLICATION.FDB** file in a safe location where you want to it saved (a network share or another server).

## Restore ADX (Accudemia Data eXchange) configurations

Now to move the configurations to another machine, you need to put that file in another ADX

installation. To do so, do the following:

1. First, [download](#) and install ADX on the new machine.
2. From the new machine locate the **APPLICATION.FDB** file from the saved safe location.
3. Now right-click and choose to **copy** the backed-up **APPLICATION.FDB** file.
4. On the new machine press the **Windows Logo key + R** to open the run dialog box.

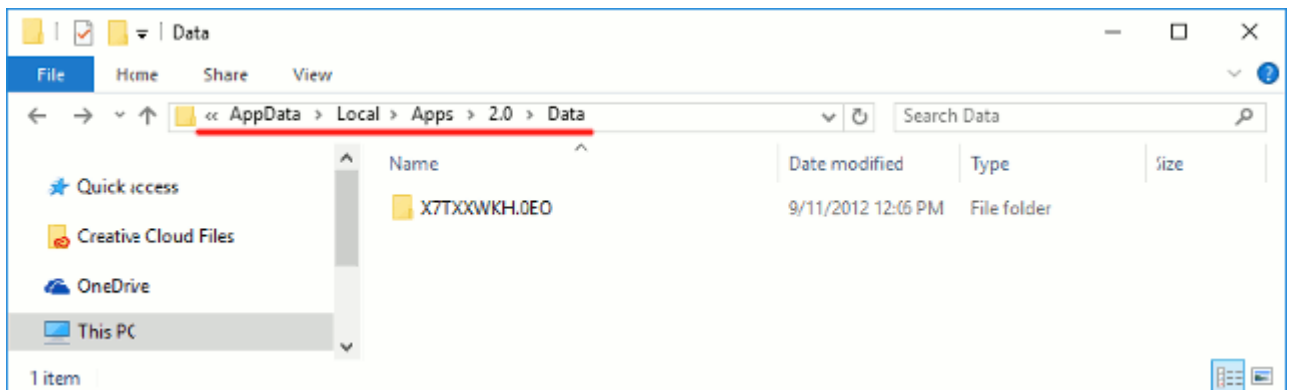

◦ Type:

`C:\Users\%username%\AppData\Local\Apps\2.0\Data\`

where `%username%` should be automatically replaced with the name of the *Windows User Account* you're logged into the PC currently.

5. You'll notice inside this folder there will be several uniquely numbered folders per ADX installation. Search for and locate a file labeled **APPLICATION.FDB** inside of one of these sub-folders.

6. Finally right-click in the folder location and **paste** the **APPLICATION.FDB** file you have backed up to replace the **APPLICATION.FDB** file you just found on this new PC.
