True statements about the about import example:

1. **Student ID** is repeated several times for each **Class** they are enrolled.
2. **Instructor ID** is repeated several times for each **Class** they teach.
3. **Subject Area Name** is used several times for each **Class** section they have.
4. **Term Name** is used just to assign the **Class** to an existing term in Accudemia (if you wanted to create the term it would require a **start date** and an **end date** column.)

*Required means if you want to create these items. To just assign them to each other simply use their primary key like student ID, instructor ID, CRN, Subject Area Name.
